

AllMotion MSRS Services Installation:

1. Unzip the allmotion_msrs_services.zip folder.
2. Copy and paste the 6 files that you unzipped to the "bin" folder located in the Microsoft Robotics Studio application folder.
3. Run MSRS, the AllMotion services should show up in your Services window.

The AllMotion EZStepper Service allows you to send command strings to AllMotion EZSteppers and EZServos over a serial communication port. The service handles the low level tasks of establishing the correction communications protocol with the AllMotion controllers.
